FOR IMMEDIATE RELEASE

Lift Turn Move (LTM) at ABTT 2010

This year's ABTT Exhibition saw Lift Turn Move Ltd (LTM) and COW Lifting Technology (COW) use the show to present their combined portfolio of Lifting, Control and Rigging equipment products.

LTM recently purchased 100% of the shares in COW Lifting Technology - the Aichach (near Munich, Germany) based manufacturer of BGV C1 and SIL 3 chain hoists, winch and control systems.

Together the two companies offer solutions for most lifting and control applications within the entertainment industry. From a standard theatre hand winch to an BS7906: Part1- Category A or automated BGV C1 hoist and control solution with variable speed, positional control and load monitoring – LTM can meet your needs.

LTM showed the LoadGuard® electric chain hoists in capacities from 250kg to 5 tonnes as standard rigging hoists and to all current European entertainment standards, e.g. the British Hoisting Entertainment Standard BS 7906: Part 1, Category A, and German Standard BGV D8 Plus.

COW Lifting Technology will show the C-Force range of hoists, winches and control systems. C-Force products specialise in fixed or variable speed hoist and control systems to BGV C1 and up to SIL 3 performance standards.

Also on display will be the latest development from the Guardian Motion Control arm of LTM – a (wireless) radio control hoist controller. Already in use on several installations and tours in Europe, this latest development highlights the added value LTM can bring as a supplier of specialised and reliable solutions in entertainment applications.

Both companies offer spares for various manufacturers, repairs and routine servicing across Europe, staff are fully trained in both standard rigging and higher integrity equipment and can offer honest advice at all stages of a project.

Both COW and LTM will be actively seeking to increase their dealer network across Europe and would welcome visitors to discuss this further at the exhibition.
