

Litestructures Announces New Partnership with Lift Turn Move

LoadGuard

Lift Turn Move (LTM) and Litestructures have announced a partnership, aimed directly at providing complete Trussing, Staging and Support Solutions to the rigging and live production industry.

Under the agreement, LTM will have core stock ranges of LitePro 290, LitePro 390 and 520 Pro trussing for immediate dispatch, whilst Litestructures will have access to LTM's acclaimed range of LoadGuard™ Hoisting Equipment and Guardian Control Systems. A direct working relationship between the two companies will mean technical advice and first class customer service is only a phone call away.

Dan Holme, Entertainment Sales Manager for LTM comments: "We are delighted with the partnership between our two companies. The move into having truss on stock is a logical step towards the one stop solution we are working to achieve for our customers. We can now supply truss as well as the hoisting, control, and rigging equipment that we are renowned for. The new range of professional products manufactured for us by LSGB is exactly what we needed to strengthen the expanding LTM product range. The truss will be sold under the LTM Trussing Systems banner which is part of the growing range of LTM branded products – such as Guardian Control Systems and LoadGuard™ Hoisting Equipment. We will be stocking quantities of the LitePro 290, LitePro 390 and 520 Pro ranges so quick dispatch is possible when needed."

Litestructures' Lee Brooks added "We see that our growth will continue to involve close working relationships with companies which excel in their sectors. Having been consistently impressed with LTM's commitment to customer service, knowledgeable advice and technical support, we are proud to have them offering what we believe to be the most competitive range of trussing and staging systems in Europe"
