

Lift Turn Move Ltd - at Prolight & Sound 2009

LoadGuard

Lifting and Rigging specialists Lift Turn Move (LTM) - show a range of their new and existing products.

LoadGuard

LoadGuard™ Electric Chain Hoists

LTM offers an extensive range of lifting and rigging equipment including the new LoadGuard™ electric chain hoists which are being presented at the show.

LoadGuard™ hoists are available in capacities from 250kg to 5 tonnes, they are available as standard rigging hoists and hoists to higher safety standards- for example the British Hoisting Entertainment Standard BS 7906: Part 1, Category A, and the German Standards BGV D8 Plus or BGV C1 (VPLT SR 2.0) - all of these standards allow some form of load positioning and holding without secondary suspension to support the load.

The hoist comes in modular form allowing standard hoists to be ordered now for retrofitting later with special components to meet present or future higher integrity standards. The big feature of these hoists are that the clutch is not in the drive train meaning that clutch wear will not compromise the safety of the load. LTM offers spare parts for hoists plus repairs and routine servicing, staff are fully trained in both standard and higher integrity equipment and can offer honest advice at all stages of a project.

Guardian Motion Control - Hoist Controllers to suit every budget

LTM manufacture hoist control systems and have constructed systems for both Direct and Low Voltage controlled hoists.

Units are offered from stock to suit many applications. These are available as movable, flight cased units, brief case type units and wall mounted systems for permanent installations.

A briefcase packaged controller has recently been launched for both Direct Control and Low Voltage controlled hoists- these were shown at the exhibition.

LTM Trussing Systems

In response to client demands to buy from a single source, LTM became a stocking agent for the Litestructures range of Lite Pro 290, 390 and 520 Professional Range of Truss on the 1st January 2009. Examples of the range will be available for demonstration from their booth, and for further details please contact LTM.

Winches

LTM showed an extended range of hand winches, as previewed in its recent catalogue and usage guide.

Training

LTM has a training facility at its Wirral HQ, and offers training schools for hoist maintenance. The facility offers opportunities for those eager to expand their technical horizons. Further schools are planned for this year both at Wirral and at client's premises.

About LTM

An extensive range of equipment is available from LTM including the LoadGuard™ electric chain hoist. LTM staff have been heavily involved in supplying electric chain hoists (motors) into the UK, European and Middle East professional entertainment and touring industries for many years, so we believe we have more experience most others in supplying and supporting this range of equipment. Please consult our testimonial section on our web site for supporting evidence.
